LANGUAGES

TypeScript JavaScript
Python Kotlin Dart
Java

FRONTEND

React Angular 21+
RxJS i18n
Design Systems
Performance

BACKEND & APIS

Node.js NestJS
Serverless Microservices
OpenAPI OpenSpec

MOBILE

Flutter Kotlin Android
NFC / Hardware API-first

CLOUD — AWS

Lambda API Gateway
DynamoDB SQS Kinesis
CDK S3 RDS

PROFESSIONAL SUMMARY

Staff Engineer and Solutions Architect with **10+ years** delivering production-grade systems across web, backend, mobile, and cloud. Specializes in **AI-first engineering** — designing structured workflows that integrate LLMs into the SDLC through contract-driven development, automated code generation, and multi-layer validation pipelines.

Proven track record leading cloud modernization across **AWS and Azure**, standardizing CI/CD at scale, and influencing engineering culture across organizations. Active Google Developer, Tech Speaker, and open-source contributor.

AI ENGINEERING — KEY DIFFERENTIATOR

END-TO-END PRODUCTION AI-ASSISTED SDLC PIPELINE

OpenAPI Contract → Codex Generation → Kiro Validation → CodeRabbit Review → Snyk + SonarCloud → CI/CD Enforcement

sdg19-final
Full SDLC executed through AI-assisted workflows. Codex + Kiro + CodeRabbit + Snyk + SonarCloud + AWS CDK. End-to-end production quality through automated enforcement.

Pettzi
OpenSpec + OpenAPI contract-first. AI-scaffolded backend, event-driven AWS architecture, Nx monorepo. Repeatable, documented pattern.

YouTube Talks

Solutions Architect — Cloud / DevOps

May 2025 - Present

Banco G&T Continental · Guatemala City

- Leading cloud modernization and DevOps transformation across multiple teams at one of Guatemala's largest financial institutions
- Defined reference architectures for AKS and Azure Container Apps; adopted as organizational standard
- Standardized CI/CD pipelines with reusable templates, improving consistency and reducing manual deployment effort across teams
- Established shift-left practices embedding testing, security scanning, and code quality early in the SDLC
- Introduced AI-assisted development workflows (ChatGPT, Copilot, CodeRabbit) across engineering teams
- Built observability standards with Azure Monitor + Log Analytics, improving incident detection and response
- Authored ADRs and governance frameworks adopted organization-wide; served as technical advisor to leadership

Azure AKS Container Apps API Management GitHub Actions

Azure DevOps SonarQube Snyk Terraform

Senior Full Stack Engineer — AI Platform

Aug 2025 - Present

Tempus · Deep6 AI Program · Remote

- Contributing to an AI-driven healthcare platform for patient tracking and care gap detection at scale
- Designed event-driven data pipelines using DynamoDB Streams, SQS, and Kinesis for high-volume healthcare data
- Ensured HL7/PHI compliance, data integrity, and security across distributed services
- Contributed across React frontend, Python microservices, and Kotlin mobile components
- Improved distributed system observability through structured logging, error handling, and tracing

AWS DynamoDB SQS Kinesis React Python Kotlin

PostgreSQL

Senior Full Stack Developer

2023 - 2025

Halo Media · Remote

- Built scalable TypeScript-first backend services and React frontends for high-throughput systems
- Improved API performance and data access patterns under production load
- Contributed to Nx monorepo architecture and reusable shared libraries
- Drove CI/CD automation and engineering best practices across the team

`Node.js` `TypeScript` `React` `AWS` `Nx` `PostgreSQL`

Senior Full Stack Lead Developer

2022 - 2023

Truelogic · Remote

- Led architecture and delivery of a blockchain/NFT platform
- Designed event-driven systems and queue-based async processing
- Implemented CI/CD pipelines; mentored developers and improved team autonomy

---

Senior Full Stack Developer

2020 - 2021

PayPal · Remote

- Built scalable systems for payments processing and charity platforms
- Improved performance and reliability of high-volume transaction flows

---

Tech Lead · Senior Developer · Earlier Roles

2013 - 2020

Yalutec · Infonet / Novuskills · Guatemala

- 7 years of progressive experience across full-stack and mobile development, native Android, API design, and team leadership
- Led development of cloud-native HR/payments platform at Yalutec; designed API-first systems for web and mobile

OPEN SOURCE & SELECTED PROJECTS

---

sdg19-final AI-First SDLC reference: Codex generation → Kiro validation → CodeRabbit review → Snyk + SonarCloud → AWS CDK. Fully AI-programmed, production-grade enforcement at every layer. github ↗

Pettzi OpenSpec + OpenAPI contract-first. AI-scaffolded backend, event-driven AWS architecture, Nx monorepo. Repeatable AI-assisted engineering pattern. github ↗

flutter_smart_forms Open-source smart forms library for Flutter. Reusable architecture, published for the Flutter community. github ↗

fjbatresv_web Personal site in Angular 21+. TypeScript-first, i18n, theming, automated CI/CD to AWS. live ↗

SerialNFC Native Android/Kotlin app for NFC tag serial number reading. Hardware integration on mobile. github ↗

PRODUCTION DEPLOYMENTS

PROJECT	URL	HIGHLIGHTS
Sinergia Dorada	sinergiadoradagt.com	Angular, Google Consent Mode v2, GA4 integration, pro-bono civic tech (service dogs NGO)
Hecho Capriccio	hechocapriccio.com	Full-stack production platform, frontend architecture and optimization
CDAG Formación	formacioncdag.org.gt	Training platform for Guatemala's national sports confederation — institutional scale

COMMUNITY & TECHNICAL CONTENT

SPEAKER Conference and meetup talks on architecture, cloud systems, and AI-assisted development — YouTube
